

## **1<sup>st</sup> VERA verification body authorized: ETA Danmark A/S**

ETA Danmark A/S has a long history in certification and global verification activities, along with its task supporting manufacturers and the Danish authorities when updating the Danish technology list. Subsequently, they came across VERA since its start in 2008 and have frequently supported different VERA activities during that time as well. Moreover, ETA Danmark is an authorised verification body for the EU-ETV pilot program launched by the European Commission as well as for the DAN-ETV system and is as such accredited according to the ISO 17020.

In any case, ETA Danmark combines excellent competences in certification and verification as well as in evaluating and approving technologies not only for industrial but also for agricultural applications. Therefore, it had been an easy decision for the VERA Board to select this organisation to become the VERA Verification Body in Denmark.

It is with great pleasure that I can inform you today that the VERA Board has decided to authorize ETA Danmark to be the first ever official “VERA Verification Body”!

From now on ETA Danmark A/S can perform VERA Verifications. According to our General VERA Guidelines, it will coordinate any activities between the applicant and other parties involved in the course of the VERA verification process. Any manufacturer can now apply for a VERA verification with ETA – in Danish or of course in English!
